

Sneeze-free SLEEP

Blooming flowers herald the start of spring – and the allergies that come with them. With Protect-A-Bed's® hypoallergenic mattress and pillow protectors you can stop the sneezing and continue the sleeping.

There's nothing worse than waking up with a stuffy nose and puffy eyes. You spend all day juggling tissues and antihistamines, so all you ask is the chance to ditch the spring daytime sneezes and sleep soundly at night. You may think you've escaped those pesky pollen particles when you're safely in bed, but you may be breathing in something even worse! One of the main contributing factors toward allergies is dust mites, and without Protect-A-Bed® mattress and pillow protectors, your bed will become a feeding ground for their meal of choice – your dead skin cells. The Protect-A-Bed® range of 100% waterproof and dust-mite resistant mattress protectors keeps both your bed and your sinuses allergen-free! Take on the allergies of the day and let Protect-A-Bed® protectors stop them at night.
